ABSTRACT

R124 (CHEMISTRY--Epoxy Resins)  
PURPOSE: To obviate any reduction of the utilization  
rate of the negative mixture, by restricting the  
grain size of an amalgamated zinc which is used for  
the negative mixture down to a certain small value.  
CONSTITUTION: The grain size of an amalgamated zinc  
6b which is packed into a negative-electrode can 5,  
is restricted to a value of mesh 150#-350#. As a  
result, the amalgamated zinc 6b can be homogeneously  
and excellently packed into the negative-electrode  
can, thereby the reaction being thoroughly carried  
out. Consequently, a defective conductivity and the  
like of a thin battery having a total thickness of  
below 1.5mm, which are due to scattered grains of the  
amalgamated zinc, is prevented.
